Locall Australis Traffic Management Policy

Our services are designed to be shared by members in a fair and equitable manner and not to be monopolized or abused by individuals at the expense of others. During peak times certain bandwidth intensive services eg p2p will be made subject to prioritisation to protect the integrity of the network and to allow fair access to all our customers.

The applications which are subject to restrictions are those, which left unchecked, could saturate all available network capacity and have an impact on the experience that all customers receive. Note: we won't restrict access to sites which need an interactive experience to use. If it takes a few minutes longer to transfer some files using FTP, then we don't believe that this causes a problem.

• Peer-to-Peer (High Demand File sharing applications) – P2P
Includes applications such as: Bittorent, Utorrent, Azeurus, Emule, Limewire and others.

• Binary USENET
Includes access to commercial USENET providers such as easynews.com and giganews. These speed restrictions do not apply to text-only USENET servers.

• Download sites
A small number of high-volume HTTP download sites which are used for file sharing, such as Rapidshare, Megaupload and Imageshack, as well as a number of commercial Adult sites which provide big file downloads are included in this category.

• Download servers
This includes speeds to some 'mirror' sites and servers which provide high-volume HTTP downloads.

Locall Australis does not allow you to send large amounts of unsolicited or unwanted mail to individuals or individual business accounts and complies with directives that restrict sites distributing pirated music, software and hardcore pornography.

No Worries Plans (formerly known as "Unlimited Web Plans")

Please note these plans are no longer available to order, this information is presented purely for existing customers on our No Worries Plans
Locall Australis reserves the right to traffic moderate users on No Worries plans during peak times depending on the behavior of the customers in question.

To ensure all users receive the appropriate level of service at peak times, Locall Australis will de-priorities users who have downloaded an excessive amount of data during a one hour period of the peak time frame.

All No Worries plans are provided as web only access plans where file sharing applications such as Peer 2 Peer, VPN, Rapid Share, USENET and other known file sharing protocols are blocked.

All No Worries Plans ONLY

All No Worries Plans	Provision
Traffic Management Period	Daily 24 hours a day / 7 days a week
Excessive usage time during Traffic Management Period	60min
Excessive data used during 60min time period	> 500MB
Penalisation	Traffic is marked as "expendable"
Penalisation Period	Maximum 6 hours
